

Ashton Aschenbrener

FULL-STACK AI ENGINEER

California / Remote | sixscripts@proton.me | github.com/sixscripts-ai | linkedin.com/in/aaschenbrener

SUMMARY

Full-stack AI engineer focused on evidence-first AI systems: agent workflows, retrieval infrastructure, eval harnesses, and product interfaces with Next.js, TypeScript, Python, and Postgres.

PROJECTS

- ▶ Built Agent Skill Registry, a portable SKILL.md registry, builder, console, and runtime for versioned agent capabilities with trust-tier governance, multi-provider routing, and a Librarian AI workflow.
- ▶ Built EvalBench, an AI evaluation dashboard for provider comparisons, custom assertions, regression detection, and evidence-backed model outputs using React, Express, Prisma, Neon Postgres, Gemini, Groq, and OpenRouter.
- ▶ Built GhostSSH, an agentic job-search workflow that extracts candidate evidence from GitHub, LinkedIn, and portfolio data, then ranks roles through structured matching logic and missing-evidence checks.
- ▶ Designed ICT Knowledge Engine, an ontology-backed retrieval system that connects financial concepts, semantic search, graph-based exploration, and source-cited answers.
- ▶ Built SignalForge, a data import and validation platform with CSV/JSON upload, Zod schema validation, deduplication, audit trails, RBAC-ready data modeling, and quality analytics.

EXPERIENCE

Founder & Engineer | Independent / Six Scripts Software

2024 - Present

- ▶ Ship full-stack AI products end-to-end: product direction, UI, backend, data model, AI workflow, verification, and deployment.
- ▶ Designed retrieval and agent systems with explicit failure handling, traceable outputs, source grounding, and eval harnesses.
- ▶ Deployed production-facing projects on Vercel with Postgres-backed data layers, provider API integrations, Prisma/Drizzle schemas, and environment configuration.

AI Engineering Student | MiraCosta College

2024 - Present

- ▶ Coursework focused on AI systems, data structures, and applied software engineering.
- ▶ Independent projects on retrieval, agents, ontology-backed knowledge engines, and evaluation infrastructure.

SKILLS

Languages:	TypeScript, Python, SQL, JavaScript
Frontend:	Next.js, React, Tailwind, Framer Motion, shadcn-style UI
Backend & Data:	Node.js, Express, Postgres, Neon, Prisma, Drizzle, Zod, route handlers, server actions
AI:	RAG, agentic workflows, tool orchestration, evals, provider comparisons, hybrid retrieval, knowledge graphs
Infra:	Vercel, GitHub Actions, Docker basics, Neon Postgres, Clerk, Vitest
